EDUCATION

B.Tech, Computer Science & Engineering (Big Data Analytics) **Expected 2027**
SRM Institute of Science & Technology, Ramapuram • CGPA 9.65 / 10 *Chennai, India*

EXPERIENCE

Full-Stack Developer — Intern **Apr 2026 – Present**
Central Institute of Classical Tamil (CICT) *Chennai, India*

- Rebuilding the institute's **teaching website** end-to-end — migrating and restructuring legacy content into a **redesigned, responsive UI**, and recovering interactive quizzes from legacy **Adobe Flash** into the new platform.
- Cleaned and migrated a **37,545-row** Tamil literary **corpus** from Excel into a database and applied **B-tree indexing**, replacing a slow, freezing search with **near-instant filtering** across the full dataset.
- Modeled and integrated a **tagged linguistic corpus** of **150,000+ word-level grammatical tags** (mapped to a metadata tag dictionary), powering the site's **grammar-analysis tools**.

Frontend Developer — Intern **Mar 2026 – May 2026**
Camomile Health Care *Chennai, India*

- Delivered a **custom appointment-booking portal** for a **2-doctor clinic**, integrating the **Clinicea scheduling API** to sync a doctor's **15–20 daily slots** for real-time booking and resolving several **REST API** authentication and data-sync issues.
- Automated patient self-scheduling with a **24/7 WhatsApp chatbot** (**Gupshup API**) that lets patients check available slots via chat and routes them to the booking portal.

Data Engineering — Intern **Dec 2025 – Feb 2026**
Analytix Hub AI *Chennai, India*

- Architected an end-to-end **data-quality management system** that ingests **Excel or live databases**, auto-detects columns, and applies **8+ validation-rule types** per column (null, range, date-format, string-length, weekday), routing invalid records to a **quarantine** queue.
- Engineered a **fuzzy-matching** module that scores name fields against a configurable **master reference table**, quarantining entries below an **80% similarity threshold** for manual review.
- Validated the system on a **1,000-row** test dataset with injected errors, correctly flagging **100% of invalid values** and name mismatches.

PROJECTS

Suvarna — Pawn Shop Management System | *React, Node.js, Express, PostgreSQL, Supabase* Live Site

- Launched a pawn-shop management system — **live with 3 businesses** — automating manual bookkeeping with **loan-maturation** and **interest-accrual** logic (**Node.js/Express + PostgreSQL**), shipped as a **PWA**.
- Optimized search over **1,000s of records** with **B-tree indexing**, and hardened the app with **secure authentication**, **rate limiting**, **auto-logout**, and **automated data backups**.

LawAI | *Python, Gemini API, pyPDF, React* GitHub

- Developed an **AI legal-assistant platform** where lawyers upload case files and get an **AI summary**, case **category**, and relevant **legal sections** — **Python**, **Gemini API**, **pyPDF**.
- Added **case management** (track cases as open/closed), a **legal news feed**, and **professional profiles with lawyer-to-lawyer networking** — a LinkedIn-style network for the legal community.

SKILLS

Languages: Java, Python, C, SQL
Frontend: HTML, Tailwind CSS, Responsive Design
Backend & Data: Node/Express, PostgreSQL, B-tree Indexing
Integrations & Tools: Gupshup, Gemini API, Git, Docker, Pentaho, Grafana, Linux (CLI)
Foundations: Data Structures & Algorithms, Fuzzy Matching, OOP

ACHIEVEMENTS & CERTIFICATIONS

- **Finalist (3×)** — Smart India Hackathon '24, Spectrum '25, InnoHack '26 (across 12+ national & college hackathons).
- **Certifications:** NPTEL — Cloud Computing, Python for Data Science. **Leadership:** Non-Technical Head, Texus '26.
